

Instant Social Anarchy

Frequent Questions and Answers:

1. It won't install.

Disable your antivirus and firewall when installing to make sure it installs correctly. You only have to do this once. Most people do not need to do this step, but some will. If you have errors installing try this. Also make sure you allow the program to run as administrator by right clicking it and giving it admin rights.

2. I'm a darkside owner and purchased Instant Social Anarchy.

My first profile account creation was at about 900 accounts on 7/10. My second was 500 (around 7/15) and now my third only created like 275 on 7/24.

Why is the number going down so dramatically? My captcha account is not the problem, it has 1000's and 1000's in it.

If you are running the same project then that will happen as it uses all of the sites in the target list. We will be adding new sites to the target list over time, and you are free to scrape your own using serpscraper or a url scraper and add them to the software. That is when this software really gets powerful - when you start adding the sites you find rather than just the sites that are in your target list.

If you are creating multiple projects and this is happening, then you need to figure out why. The first thing I would make sure of is if I am using avatars correctly. Not using avatars can increase your chance of looking spammy and getting your ip blocked for that site.

If you are using avatars and you are using the same site linkpool to create the sites, then try changing your IP address by using the proxy function in ISA. Use a proxy (I recommend using private proxies – you usually buy them every month but they are secure and used only by you). To test whether it is the IP address prior to investing in a throw away private IP address, just unplug your modem at night when you go to bed – usually when you wake up your IP address is different. Next, do a profile creation run and see if that allows for accounts to be created. If so, then your old IP was blocked from some sites and you should review what you did during that creation run that caused the sites to block your IP. Usually it is by looking too spammy. Adjust your tactic and move forward!

3. I am running the software and I did not check allow Explicit Sites. HOWEVER, it was creating an account at: <http://smuttweet.com/>. Are there other sites like that that are going to be created even though I opted out of the Explicit?

On occasion that will happen as the site was not marked as such or was not flagged in the tool as adult. This will happen due to the fact that the sites are added using search strings and hard to filter without hand checking each site.

To remove it so it never happens again: GO TO CONFIGURATION>PLATFORM TARGETS>SELECT PLATFORM TYPE – REMOVE THE SITE FROM LIST. Now you will never have that issue again!

4. I did not see where the email for site confirmations is created. I hope it will not be using my personal private one I used to join DotComSecret.com, etc.

A new email address is created and used for this process – none of your personal email addresses will be used.

5. News tabs says I am not authorized to access.

We cannot replicate this error, but it is most likely a windows explorer configuration issue on your computer.

6. If I want to return to a saved profile and use it how do I know it is selected –

You select it from the drop down list. I usually select the platform I am going to target for that run and press “save profile”. I then start creating accounts or submitting messages after that.

7. When I click on the save project button does that mean it is now available to go forward again?

Yes – Once the profile is saved the window should close.

8. I am waiting for license from death by captcha and decaptcher so when I try to use the manual captcha on setting 3 - I try to copy and paste from notepad to the keyword field but nothing happens whether I use ctrl v or copy paste on mouse click?

You must type them into the captcha box when it appears. This is why I recommend the anti-captcha services.

9. I did manage to get it to take the copy paste one time but then nothing happened when I click on the save linkpool button? Very frustrated - watched the video then watched again and took each step pausing video but the software is not behaving as shown in the video?!!!!!!

Once you click save linkpool you can close the link pool screen. It will be saved in the drop down box to select in the future.

10. Won't google catch on to a site getting so many back links so fast? What is the risk to me using this for my clients sites? Can we get delisted by google?

If something goes viral on twitter or another site similar - it gets many links from places like these. Google does not penalize it for that. You could go overboard and get yourself into trouble if you were to use it way too much - but I suggest you use it for your parasite sites like web 2.0 sites and profiles, youtube videos, articles, and other things. I also suggest you not just root link but deep link your pages on your site. I have been using this tool for quite a long time, I have not been delisted for anything.

11. How do I know where the accounts have been created? e.g I don't have a list of urls and user name and passwords to go and physically view the sites that I have just created.

This list is created in the registration tab area. When you load a profile you can select the platform and press the + sign next to it to open it. Once open you can see the account URL and name along with password.

12. When I create accounts it will come up with the fact that it has registered 465 accounts, then say new accounts 17. Does this mean that it has only created 17 accounts? Why not 465 creations?

It means 17 were created after the run of 465 accounts. This may be because you need to use a proxy or different IP address, or your address may be blocked from that site. This happens on occasion when you first start learning due to opening many accounts on these sites and getting your IP flagged. Try resetting your IP manually, using a private proxy IP address or unplugging your modem for 6-12 hours to change your IP.

13. When I click on the Configuration tab and go to the Manage AntiCaptcha Services there is only one listed, DeathByCaptcha. In the user manual it says there are 3 and I already have an account at Decaptcher.com. I would like to use it as it has been very effective in the past.

ISA supports all 3. You need to select the "anti-captcha" tab and mouse over the selection WITHOUT CLICKING IT. The 2 other anti-captcha options will appear then.

14. It will not get past the registration phase of with Windows 7.

For Windows 7, you have to right click on the exe or icon and then choose to run the application as the administrator.

15. I Bought ISA, it simply doesn't work even with manual captcha mode. No accounts registered. I tried to run on two different computers, with/without firewall - zero result.

Make sure you whitelist it in your antivirus and in firewall.

16. Can you give me a list of the platforms the software uses, i noticed Elgg and Status in the video but couldn't see any others.

Revou
Jisko
Elgg
Yonkly
StatusNet

We have a few more platforms we have not released for it yet, but will. Those will be added over time to help keep lots of accounts for users.

17. Can one spin the Bio content section with this tool. In fact are all content area spin-able throughout the software?

It is spinable in the bio area. All other content areas are marked if it is spinable or not. If you do not know, leave the area blank and try to continue. The message that pops up shows whether content in that area is spinable or not.

18. I just bought Instant Social Anarchy. My first run was through the network Jisko. This is the network that the video training suggested to try 1st. Here are my results: 465 accounts and only 13 accepts. How am I going to get massive backlinks from this?

There are two reasons. 1st being how we set up the auto email registrations. It gets forwarded through some domains, as they get blacklisted the accounts registered through them decrease. We are adding 100 times more than we had previously loaded into it, so this should not be an issue moving forward.

I also suggest you do 2-3 registration runs per project before going to the next step below.

The other issue is that you need to go to the "Manage Platform Targets" option and select each platform. Highlight it and press the "Reset penalties" button. Once a target does not work 3

times it is added to the do not register list until you reset it.

19. Another disconnect I noticed from the training video was on the video Jisko showed 1749 possible accounts. Now it is down to 465 - why?

I have added my own sites to my tool. I suggest everyone use [Serpscraper](#) to add their own list of targets. In addition, we are always adding more over time to help keep things fresh. You may also notice that accounts being registered continue to show up in the counter for up to an hour after it says it has completed the task.

20. How am I to use the ping services list you give. I would like to ping the profiles but see no way to do this through this software.

It is set to auto ping for you.

21. After the project finished I opened the reports folder hoping to see a report on the 13 profiles I did get but there is nothing in the report folder. Are there reports to be generated?

Those are stored in the register tab after you load a profile. You may see the site and the username and password used to create it.

22. I can figure out how to add URLs to the targets one at a time. Is there a way to add many scraped URLs to the targets...and, do they need to get trimmed to the root domain or should they have /register added to them?

You can add them with a spreadsheet or text file en mass by copying and pasting into the "Add Target" field in the "Manage Platform Targets" option.

Do not trim them down - it must be the register page for status.net sites, the others are the page that allows for you to register...

23. If I buy instant social anarchy can I use this program on two computers? Like on a laptop and desktop?

No. Unfortunately it is 1 computer per license. You can remove it from one and place it on another if need be. Usually you can move them quickly; sometimes it may take up to 24 hours for the registration server to update the change.

24. The system isn't working when registering accounts unless I uncheck "Use Custom Name". But then if I don't tick off "Use Custom Username" I'm unsuccessful signing up friends and groups and I wonder - is this because of the weird username combos the system comes up with? Likw,

who wants to be friends with nfc9iagiu675#&^shnb% ?

A server was down after launch causing this problem. It has been fixed. Using a custom username is more desirable, but it makes it less successful. Try using the keyword and a number in the middle and the end to help.

25. I am unable to register for "Groups" and could only get 2 friends. I have used keywords like health, womens health, mens health, bladder, incontinence and I've even tried "Join Groups with the most subscribers". Nothing works. I've tried exiting the program and starting over. And I get nothing for joining groups ;{

At times some of the sites do not have groups for those terms. I prefer using the function get groups and friends with highest friend and group members. You can do both for maximum results.

26. Can I install Social Anarchy on my MAC? Or is this Windows ONLY software

You must use windows on your MAC or an emulator. It does work using it that way on a MAC

27. When I registered for decaptcher.com, Tthey sent me Your port is:3513 Your address is: api.decaptcher.com....what goes where?

You only put in your user name and password to access decaptcher.com to make it work.

28. How many platforms included?

5 platforms with several thousand loaded into it. We also have 5 more platforms we have not rolled out yet.

29. Can we add more platforms?

You cannot add more target platforms, but you can add as many sites as you wish.

30. What percentage of these links will stick?

The percentage is pretty good for sticking - but as with anything it will depend on how "natural" the message submissions are and how natural the profile looks.

31. Are these links nofollow?

Many are follow links, many are not. I always find a good mix of both is best or you look a little odd in the search engines eyes...

32. What social media platforms does this work with. Does it work with Facebook, MySpace, etc. Can you make multiple accounts for these and others?

None of the classic social media platforms like Facebook are targeted here. We are going after a different type of social site. Look at identi.ca - that is a great example of some of the types of sites targeted.

33. Avatars do not work for all of the sites.

Sometimes things change and do not work any longer. This requires some work to get things solved and added to the software correctly. We know the issue and will have a fix for this in the upcoming weeks ahead!

34. Copy and paste is not working when adding targets to the target list.

Open your notepad and then drag the target file into it to open the target file. Once open look at how the sites are in the file and add them accordingly. Do not forget to "Save As" a UTF-8 format when saving. We are fixing the copy/paste - but in the meantime this may help.

35. Also - as far as adding social sites to social anarchy. Where do you find all of the sites to add?

You can by looking for footprints by searching things like "Powered by StatusNet", ETC.

36. Hi, I've been using Instant Social Anarchy for a couple of days now. Just querying the email and video claim that ISA will:-Create over 10,000 social media accounts at the push of a button I ran the registration process with the pre-loaded platform targets and got around 700 accounts which is way way less than 10,000. So what am I doing wrong?

You aren't doing anything wrong - You can make multiple projects with different accounts in them. The other thing is that you should find your own sites to load. This is WAY more powerful because not everyone will be targeting the same sites as you. This allows you to fly under the radar and also add to your total targeted sites. You want to search for in these "footprints" and others you discover in google and MANY OTHER SEARCH ENGINES to get more sites to target.

****Remember – using [SERPSCRAPER](#)(use “dotcomsecrets” as the coupon code) or another URL scraping software will allow you to do this easily.

37. How do I find more sites to add to the targeted site list?

Search for these types of sites in search engines. Make sure you add the page that allows you to register for the site – like this <http://identi.ca> ---- this page has a way for the person to register for an account on the site.

****Remember – using [SERPSCRAPER](#)(use “dotcomsecrets” as the coupon code) or another URL scraping software will allow you to do this easily.
