

# Instant Social Anarchy User Guide

Presented By

The Darkside Of Dotcomsecrets

## Introduction

This cutting edge Social software is new to the market but has been used extensively by a few chosen users with great results. As with any new software of any kind it takes a bit of time to iron out any possible bugs or problems users may have operating the software. At the time of publishing this user guide there are no known bugs or error., If for any reason you come across anything which causes you problems please don't hesitate to contact us through the support links on the news tab in Instant Social Anarchy.

## User Guide

- A popup box prompting you to enter your name and license will appear upon starting the program.
- Enter the name you used to purchase the software. This will be showing in the download area and in an email we send you.
- Enter your personal license key we give you which will be in a format like this XXX0X-XX0XX-XX0XX-XX0XX-XX0XX-XX0XX
- Your software should now be running and you can start getting social.

## Open the application – Once it's open you are at the 'Project Edit/New' Tab

### Projects -

- Name Your Project! The best idea is to group them by sites you are promoting. Keep all account profiles separate in your spamming! For example if you have 3 sites about clothes that you would like to promote and 5 about sports - you would create 2 projects and have their profiles look like clothes lovers or sport fans.
  - You may need to the top navigation and select 'Projects' then select 'New', in order to start a new project.
  - You can select previous projects by clicking the 'Load' button and selecting the saved project you desire to run.
- Select the network you are targeting – StatusNet, Elgg, Jisko etc...
- Twitter User and Twitter Pass
  - If you add your twitter information, you can post to your twitter account with this feature. We may be implementing an affiliate program for the software, which will allow you to post links to your affiliate account for Instant Social Anarchy
- Profile Template
  - This is where you will enter in profile information you want to be displayed on your new accounts being setup. You should do this to make the account appear much more natural. Most sites allow you to put a link to your website in the profile, make sure you add your site.

MAKE SURE YOU USE A GOOD NAMING STRATEGY WHEN NAMING YOUR PROFILES AND LINK POOLS! This

will help you out quite a bit later on when you have several profiles you are managing.

**An Example of Profile Information:**

Stay at home mom enjoying time with my children as they grow up. I have 2 beautiful children and work on a website called <http://www.YOURSITE.com> in my spare time.

- Explicit sites – click this if you do not care whether you spam adult/pharmacy related sites or not.
- Click Save Profile – Your Profile is not saved and can be loaded in the future.

## **Once you are done configuring this – Click on the ‘Register Accounts’ tab**

### **Thread Gauge**

This will allow you to decide how much of your computer resources and internet connection you want to use for this task. If you have a sweet machine with a fast broadband line, feel free to crank it up to 30!

### Captcha Service (Configuration > Manage Anti-Captcha Services)

- It comes in default “ManualMode”. This means you will be solving captcha by hand.
- If you wish to use an automated captcha service (which is highly recommended), there are currently 3 options:
- Choose your preferred service between Decaptcher.com ,Beatcaptcha.com, or Deathbycaptcha.com (I recommend setting up accounts at all 3).
- If you are going to use Anti-Captcha services, enter your details and fund your accounts with enough to keep you going for a few days or till you have enough profiles setup.
- The Captcha services are easy to use and charge ridiculously low prices such as \$2 for 2000 solved captures.

### **Link Pool**

- By default, ‘demopool’ is in place.
- Click the icon next to the drop down box to add your own links.
- This is a very big step – make sure you are adding your links and you are selecting the correct link pool when creating accounts.
- Add your domain or url and a few keywords for your target SEO terms which will be displayed on sites that allow anchor links.

## **Avatar for your Profile (Configuration> Open Avatar Directory)**

- It is used to make your profile look like you created it manually as a real user we added a group of random avatars.

- If you are just using Instant Social Anarchy to post random links and sentences, you can just add more to this or leave it as it is and the tool will publish a different avatar as a Random profile pic with each account.

**If you are using Instant Social Anarchy for personal branding reasons, you can go in and delete these random avatars (or store them) and add your own 80x80 profile picture to show on all your accounts.**

- Press the 'Register Accounts Now' button. Watch the magic!

If you decide to fill in the captchas manually it is best when you choose only a small amount of concurrent threads. You won't be able to type captchas so fast and if you are unable to fulfill this task fast enough the connection to the website will time out and the account cannot be created successfully.

*\*\*\*If you do it with Captcha solving software, you can sit back and relax!*

## **Once you are done configuring this – Click on the 'Groups' tab**

When you have registered a sufficient amount of accounts you will need some friends.

- Just click the "Add Random Groups" radio button if you are looking to build up authority and pagerank to your profiles.
- If you are doing a laser targeted social media campaign and need to get your message in front of the right people you can find friends to automatically add by keyword.
- Eg: Weight Loss, Loose Weight, Fitness
- Same again with the threading as before, If you have a computer with good processing speed and a fast broadband connection or leaving overnight - just set to 30 threads and hit 'Join Groups Now'.

## **Once you are done configuring this – Click on the 'Make Friends' tab**

This is the same as groups and this will add lots of random friends to your account. You should use this quite frequently.

## **The "News" Tab**

- Please read this every time you open Instant Social Anarchy because we will be updating regularly to show you any new features added or tips and advice.

**Other Tips You Have To Know!**

When creating a message YOU HAVE TO ADD the #link# token into the message or there won't be any links inside those messages (You may want this at time, but most likely not).

Eg: {Hey|Hello} there {friend|webmaster|dude} checkout my site #link# here.

### **Spintext**

- See example above or use the automated spintext builder for examples.

### **Automated Spintext builder**

- This will simply replace the chosen kind of words with a set of synonyms. Good results are achieved with only replacing one or two types at the same time. Like only replace all N(ouns).

### **Proxies**

- It is better to not use proxies because it's not illegal. If you are REALLY paranoid or have a need for them, then please use. ;)

The license will unlock from your machine within 24 hours (this could be increased if there is lots of switching around from machine to machine on your end). If you reinstall your windows or something similar please be patient.

If you wonder why some plugins are so slow - this is because of the email activation and waiting times for the target site to deliver those
